We say that Tomcat 7 supports protocol 1.3, and that the connectors all support ajp13. ProxyPassReverse / This example would reverse proxy By the way, lets point out that IIS will not do reverse proxy without an ACL policy. You can try the following command to see if your application is connecting to Tomcat. curl You will get the response Hello from the servlet and GET /servlet/Hello.jsp url will return this response. AJP13 Oracle has recently provided the full source code and license to use this protocol. There are various examples of using it in products, but they only show a basic configuration. For production environments I strongly recommend using the Apache 2.0 license. Apache JServ Protocol 1.3 (AJP13) is an extension of Apache JServ protocol 1.2. Apache JServ 1.2 is designed to be platform independent, while AJP13 is specific to HTTP. The AJP13 Protocol is a slightly modified version of the AJP protocol. AJP Protocol 1.2 defines how to communicate and transfer data between the client and the servlet container.. JkMount /*.jsp ajp13 JkMount /*/servlet/ ajp13 JkMount /otherworker/*.jsp.Q: Using Windows 7: moving a whole partition I have a software that requires a hard drive with its own partition to run. (I know, I'm a bit stupid) So I would like to move my partition so that I can run the program. I have a laptop with Windows 7, how do I move my partition? A: If Windows 7 is not booting to the partition you need to move, you will need to completely destroy the partition and then recreate it. You can do this by running Diskpart.exe. Follow the instructions here. Note that there is no way of moving a file system to another partition. A: If you have not gotten around to backing up your data, I would recommend that you do so before you start trying to move the partition. The only way you can get it successfully without permanently losing data is if you have backed up your data, and you can easily do this
