Here is my current code:

```
def starting(): gameType = { "menu": [0, 0, 0], "attack": [0, 0, 0], "melee": [0, 0, 0], "magic": [0, 0, 0] } print("Welcome to " + GameType + "!!") print("You are a warrior trapped in a game of death.") print("It is your time to shine.") print("Enter one of the following commands:") return gameType[gameType["menu"]] gameType is a dictionary with three values: menu, attack, and melee. menu is the start of the game, attack is the kind of attack the player will make, and melee is the kind of attack the enemy will make. I am trying to set the gameType dictionary like this: gameType = { "menu": [0, 0, 0], "attack": [0, 0, 0], "melee": [0, 0, 0], "magic": [0, 0, 0] } I then want to make the dictionary values the same as the "menu", "attack", and "melee" values
