The features of AutoCAD and some of the first AutoCAD files. AutoCAD is the de facto standard of CAD, and is a staple in architecture, engineering, industrial design, and drafting. AutoCAD is also a popular graphics application, used to create artwork, logos, and packaging. Other types of drawings created in AutoCAD include sales graphs, structural engineering designs, and technical illustrations. In the late 1990s, Autodesk developed AutoCAD LT, a point-and-click replacement for DOS/Windows menu-based versions of AutoCAD. The first commercial release of AutoCAD LT was released in March 1998. In 2004, Autodesk unveiled AutoCAD 2009, a major redesign of the desktop and mobile versions of AutoCAD. History Autodesk's AutoCAD is a long-standing and widely used commercial CAD product. It was first released in 1982, for the Apple II series of computers. Since then, it has expanded into many different software products and hardware devices. The early days of AutoCAD The first version of AutoCAD was called AutoCAD System. It was a desktop-only software application that ran on internal graphics controllers. At the time, this meant computers with built-in monitors and graphics boards, such as the Apple II or the Commodore 64. The first version of AutoCAD System was available in April 1982. AutoCAD System Version 1.0 was priced at \$2,495. The Apple II family of computers were manufactured by Apple Computer, Inc. and used the Apple II's 16-bit Motorola 68000 CPU and 2 MB of RAM. The CPU ran at 6.66 MHz (33.33 MHz with a Z80 add-on) and the graphics board ran at 33 MHz. A user could choose from different screen resolutions, ranging from 256 x 192 to 1024 x 768, with 25 or 40 colors. For video output, the Apple II used standard composite video at resolutions of 640 x 480 or 800 x 600. In 1982, most commercially available CAD packages ran on mainframe computers or minicomputers. Each CAD operator (user) used a separate graphics terminal connected to the mainframe computer. This was done to enable operators to use different graphics views (CAD or other software views) at the same time. CAD operators used a mouse, drawing tools, and a Graphitec Engage
