Hex2bin is a software for converting the hexadecimal file to the binary format. It is useful for those who frequently have to move files between different devices. The use of this software is very simple and convenient: choose the input file and then specify the output file. The tool will do the rest. I have been doing CAD for more than 18 years, mostly in the areas of mechanical engineering and architecture. My hobbies, apart from computers, are cycling, hiking, running and skiing. When not programming or writing software, I can be found in the mountains near my hometown. Kale - Black Kale and Endive + I do not even consider myself a kale enthusiast. I know it is much more nutritious and can grow in an urban environment. It is versatile, takes well to being pre-cut and/or pre-washed, so I have been trying to make the most of it's benefit. Take a look at the pictures. The top two are the same kale that I usually cook. The bottom two are my method of using kale when I'm having it for dinner. I pick the kale leaves, put them in a bowl and add water. I don't soak them long. Usually I cook with the tender kale leaves right off the plant. In the picture at the bottom right, I have drained the water out of the kale and then added in a small amount of salt. I thought this might have helped with the bitterness that seems to come from the kale. I then add 1/3 of the amount of oil and margarine that I will be using. It only takes a couple of minutes to cook the kale. I usually have this at the ready and served with some garlic bread. For those that like a bit more spice I sometimes add some freshly ground black pepper. On occasion I have added some grated cheese on top, if I am using cheese to flavor the dish I am cooking. I usually serve this with salad or pasta, but also occasionally with steak. It is a versatile vegetable. My favorite way to cook it is in an iron skillet. I like to put it over the coals of the campfire. I would just make sure that you cook it thoroughly. If you cook it for too long it can get a bit chewy. I usually start with 7 minutes and then check. If you feel that the kale needs more time, add more time until it is done. Preg

A short synthesis of barbatanine, a long-sought tetracyclic indole alkaloid, is presented. The formal synthesis commences with the preparation of the 2,4-disubstituted pyrrolidine 5, and uses (a) a novel ring-closing metathesis/Sonogashira cross-coupling to form the key oxepine 7, (b) an enantioselective, copper-catalyzed cyclopropanation to form the pyrrolidine, and (c) the standard Biginelli cyclization to form the tetracyclic core. Barbatanine was isolated from the cyclized material in 1% yield. Q: How can I find public key using private key? Let's say I have private key x and public key y. I have the public key and I know the number x. How can I find the private key y? Is there a general way of doing this? A: The private key is just a way to encode a message: given a message m, the corresponding private key is a value x such that  $m = xG$ , where G is the base point of the curve. The public key is a way to encode a pair (m, q): where q is a divisor of the order of the
