Most of the time, computers run on the Windows operating system, which means they come with all kinds of useful features. However, there are times when you may want to run an alternative operating system - such as Linux - which does not have all these features. It is not a nice task, because if you do not know how to install and configure it, you may end up with an unusable PC. When you want to install a new operating system on your Windows-based computer, you will need to do several things, such as find a good support for your hardware, find a setup program and write a series of instructions. Fortunately, we have done all the work for you. After you read our guide, you will know how to install a new operating system on a PC with a dual-boot function, you will also be able to install it without a live CD. If you have a triple-boot system, you will know how to fix it. All in all, the steps are quite easy, so you can follow them without fear. All you need to do is download the setup files, double-click them, and wait for it to finish. It should take about an hour to complete, so you can do it in a couple of hours. When the installation is done, you can log in to your new operating system, which should now be as easy as pie. Dual-boot OS X on a Mac After reading the previous section, you may be wondering if it is possible to use Linux on your Mac computer. In fact, it is quite simple, because your Mac already comes with a few basic pre-installed software. You need to decide whether you want to keep your Mac's main system and install Linux on a second partition. If you want to keep the original setup, you need to use macOS's Disk Utility application, which you can find on your Mac's Applications folder 1d6a3396d6
