### What's New In?

How to start the program: · Click on the EMailNotifier icon in the systray · Type a URL into the program's URL box · Enter the username and password for your email · Click OK. An icon of the program's progress will appear in the systray. This icon will update itself when the program is updated. How to shutdown the program: · Click on the EMailNotifier icon in the systray · Click on the red cross in the corner · Click on the application's name again · Click on the red cross in the corner · Click on the application's name again How to shutdown the program: · Click on the EMailNotifier icon in the systray · Click on the white cross in the corner · Click on the application's name again · Click on the gray cross in the corner · Click on the application's name again Security settings: No personal information will be saved on your hard disk. The program will use the settings for you that are stored in the registry to connect to your email account. These settings can be changed. If the program is disabled, you'll need to sign-in again and your settings will be stored in the registry. You can choose to move your settings to a file or to a local registry key. Note: You can run the program without signing in. (This will make a local copy of your settings) Note: You can now do things like have multiple windows, use minimize to show the icon in the systray and use the program while not signed in. Latest Updates: · Added an option for specifying the username and password of your email provider. This way you don't have to enter them manually. · Added a checkbox for the program to terminate when you close the application. · Updated the program's documentation in the Help menu. · Minor code improvements. Bugfixes: · Fixed a bug that caused the application to close if you used the force quit option. AppNote: I use this program for several months with no problems. E-Mail Notifier is an Email Notification application The Software will enable you to set up an Email account Using some gmail functions like sending mails directly from the program via compose or reading the mails via gmail web interface Using other email accounts (pop3 etc.) like Yahoo, Hotmail, Outlook and Evolution as
