My mobile phone has been used by my family during the weekend and I got 3 new photos missing from photos gallery in my android mobile phone. I searched in few forums to get the procedure to recover those photos, I tried few of those, most of them were just unlocking and clicking pics again. I had no luck at all. So I came across your post and tried R-Photo and it worked like a magic, got my photos back. Just wanted to share this post as I am not getting any support from android community. Thanks for the help. R-photo is so simple to use. I was browsing for apps to recover my deleted data and this app hit my screen and took me to a path to recover my lost data. I tried few other apps in this category but this one was better in my opinion. Thanks R-Photo team for making a great app. Works well for me. I tried lots of apps like this and this by far works best. Good app for restoring all your lost photos. The app name is simple but the app name is misleading. This app actually has a database of all your media files (.jpg,.mp3, videos, etc), and has the ability to search through your whole media library for the right pics. I've been using it for months and it has a database of all my files on my computer. This makes it so much faster than any other app in this area. If you've lost the file it's also possible to recover in most cases. As far as trash goes, in the darkroom it's as easy to select which trash bin to delete photos in as it is to

---

select which bin to copy them too. This is basically exactly the same as deleting, only that the image is being saved to the database as well. Just select what you want to recover and click on the database name at the bottom. Works perfect, I've used it for years
