AutoSnap: Quickly and accurately place objects by snapping to points on their edges, like a lasso. Use the Snapping tool to create points for the corners of rectangle or circle shapes, and then select a corner and draw a line, and AutoSnap will automatically snap to the selected corner. Create an AutoSnap with a new command: snaps to points. (video: 4:20 min.) Data Tools: Manage large CAD files with the ability to assign units and change the default unit-of-measure, customize AutoCAD to your liking, and export to Excel or CSV file. (video: 3:50 min.) New G-Code generator: Explore a new approach to machine control: use G-Code (Gosper code) to control machinery and robots. Automate a 2D or 3D machine using G-Code. (video: 1:27 min.) New Blocks and Symbols: 2D and 3D rendering can be improved by adding graphics and icons to 3D blocks and symbols. These can be created with the Shapes tool or using shape macros. (video: 3:50 min.) 3D reference and documentation: Take advantage of the new lightweight reference structures that can be used in more detailed 3D models. Create 2D and 3D references for BIM (Building Information Modeling) models. (video: 1:27 min.) Master Layouts: See how to master and simplify your designs by learning new methods for reducing and simplifying master layouts. (video: 1:15 min.) Designer productivity: Design documents and products get completed faster by using advanced design and drawing tools. Find

time-saving shortcuts to manage your work quickly and efficiently. (video: 3:45 min.) Drawing shortcuts: Use shortcuts that allow you to get from one place to another quickly. Drag and drop objects to their destination. Create graphics, draw lines, find objects, and move them with one click. (video: 1:16 min.) 3D drawing tools: Make the most of your 3D tools for quicker, more accurate drawing and modeling. Use 3D arc selection for smoother, flexible tool movements.
