24 Dec 2021 - 10:45 AM Sir, Thanks for the news! I'm trying to get a new CPU, but I can't seem to find the right one. I have looked every website and shop, but I don't have a suggestion even for the AMD Ryzen 3000, and I'm still looking for a cheaper one. I don't even know if I can afford enough to buy one, but I'm trying. I'll just have to wait to see my processor's price for the next 2-3 weeks

24 Dec 2021 - 10:45 PM I have a new Intel Core i5 Haswell processor and I can't seem to find compatible GPU for my Windows 7 Home Premium 64bit Home. I use a GeForce 460 2GB. I've tried to reinstall Windows, and a number of drivers have failed. Last edited by Otter; 14 Apr. 2015 5:25 Hi, This means you've tried to reinstall Windows 7 Home Premium but you've only got Windows 7 Home Basic. You need to use Windows 7 Home Premium 64bit Home. You can't replace your GPU with a GTX 460 GPU Hi Everyone, I am attempting to solve a problem with AMD radeon HD 5650 GPU. After the installation of Radeon Software Crimson Edition 16.3 and overclocking the GPU to 600 MHz, the game runs with a suddenly respeded graphical settings and responds to both the FPS value and the FPS clock. The game won't start up even with a higher graphics card. I found this info, that this is a bug which will happen to the game from a GTX 460 GPU. I don't have a GTX 460 GPU, but I have the same problem. HAS AGAIN BEEN AFTER DECEMBER 2018. Please fix this bug. Also, should be able to install on a AMD GPU. I think I have a problem here. Thank you for your help. Last edited by Kepler; 16 Dec. 2018 7:10 If you are playing in an AMD GPU, it's a bug. If you are playing in an Intel GPU, it's not a bug. An intel GPU won't work on an AMD GPU if the amd driver doesn't have a proper AMD driver If you are playing in an Intel GPU, it's not You can get it fixed by running the following command from the command prompt. `cputxt.exe -q -f /WINDOWS/SYSTEM32/CACHE_TABLE -WINDOWS/SYSTEM32/INFCACHE -noninteractive` The command above is a Windows command prompt that can be run by typing the names and arguments. `CPUTXT.EXE -q -f /WINDOWS/SYSTEM32/CACHE_TABLE -WINDOWS/SYSTEM32/INFCACHE -noninteractive`: This is the command that runs whenever you are playing using the AMD GPU. This is the command that runs whenever you are playing using the GPU from the Intel drivers. It should be run at a low latency. For example, if you are playing at a very low latency with AMD GPU running a game, you may have to skip this step. For more information, see AMD Radeon Graphics Information This is the command that runs whenever you are playing using the AMD GPU.
