Scalar Field Gradient Model Features: Convenient simulated environment in which one can manipulate scalar fields Hover over plot to obtain gradient profile in real time (Java based) Controlling the simulated environment and displaying the results of an experiment can be done with mouse clicks and double clicks An example of a simulated scalar field experiment. The green colored spheres represent values of a scalar field, while the gray spheres are the centers of the zero-crossings of the scalar field. Clicking on the sphere or zero-crossing center updates the scalar field value Scalar Field Gradient Model Users: For a simplified tutorial approach, Scalar Field Gradient Model can be used to view and model scalar fields Using this Java based application can provide a starting point for students of mathematics, physics and chemistry, and others interested in learning about the mathematics of scalar fields Scalar Field Gradient Model Setup: To start the Scalar Field Gradient Model: Select Java and continue the setup process by selecting the default options. In the Select the installation directory dialog, enter the location of your choice. Click OK The Scalar Field Gradient Model application opens in a new Java Frame. This Java Frame can be placed on the desktop, in a JFrame in a JDialog or in a JApplet. The upper right corner of the application displays the message "This is Scalar Field Gradient Model." The upper left corner of the application displays a drop down menu where the current tool name is displayed. Select Edit to access the settings for the current tool. Select New to create a new tool. The Scalar Field Gradient Model application displays the default settings dialog. This dialog can be used to customize the experimental environment and the displaying and simulation behavior of the experiment. In this particular example, the experiment is a scalar field which simulates a vector field by the usage of the StreamPlot class. Scalar Field Gradient Model Results: The application displays the Scalar Field Gradient Model Results window after successful creation of the Scalar Field Gradient Model. One may view the results of the experiment in this window. Scalar Field Gradient Model Tool Window: The tool window is used to manage the experimental environment. All experiments have a tool window and can be created, modified or deleted using this window

This is a Java based teaching model for gradients of scalar fields. The user is able to change the resolution, or mesh count, of the grid, and the gradients are displayed for each mesh. Gradient display can be viewed in different ways. Press the F2 key to switch between 3d and 2d viewing. Press the G key to view the gradient as a 2D vector field. Press the P key to view the gradient as a scalar field plot. Press the S key to save the gradient plots. Press the T key to load the plots and gradient profiles. Press the key to change the resolution of the grid. The gradient plots are displayed with the gradient plotted as a colour map. This can be viewed by either 3D or 2D viewing. The gradient maps are displayed using Java primitive data types, including double and float. Press the Enter key to exit the program. MISSION: Maintain an implementation of gradient display for Java.
