Review Source Review Type: Avast is the
leading name in antivirus software and
internet security for personal computers. If
you aren't already using its programs, you
should download their free products today.
These include antivirus software, internet
security, anti-spyware software and more.
Features: These programs are essential for
every computer user. They work in
conjunction with several basic functions of

Windows that are necessary for successful operation. Things like browser protection, real-time security, secure web browsing and system performance enhancements are things that consumers expect. The Ecatel full package comes with a monthly subscription starting at \$20. Like other internet security products, security software by Ecatel is divided into two groups. In this case, the "basic" package is free and includes the necessary security tools. The "plus" package, however, adds advanced features such as internet security and online protection. Both packages are accessible in a number of language editions, including English, Spanish, French, German, Portuguese, Hungarian, Italian, Chinese and Japanese. The basic package is available for free.

The more advanced package is \$7.95 a month. Who Uses It: We reviewed this program for a number of different reasons. We looked at this software because we had been unable to find a full package with all the features we wanted. We needed a solution that would take care of web browsing protection, anti-phishing, spyware, a real-time antivirus scanning engine, browser protection, parental control and security for email, IM and FTP. Ecatel fit the bill for all these security essentials that we needed and more.

Additionally, the application can help remove fake Flash Player, and it includes options to delete already-running programs. System requirements The

system requirements indicate the minimum and recommended system specifications. However, the more current model of a specific antivirus will have a higher minimum system requirement, as it will offer a better level of protection.

Internet connection The program can be downloaded on a separate machine, and it can be installed on a USB drive or DVD.

After installation, the program is ready to run on all your PC's.
