Adobe Creative Suite 3 Web Premium CS3.2, Designer Premium CS3, Web Premium CS3,  $\hat{A}$  Adobe Cs3 - Design Premium 8036 records found, first 100 of them are: Adobe Creative Suite Cs3 - Design Premium. Mobile electronic devices, particularly portable or mobile electronic devices such as cellular phones, tablet computers, etc. are now widespread and used in a variety of different applications. For example, such mobile electronic devices, which are also referred to as user equipment or user terminal, are used in various applications such as e-mail, voice/sound, short message, information, web browsing, video recording and/or playback, taking pictures or videos, playing games, working as a scanner, and so on. Further, as the use of such mobile devices has increased, the user's requirement for enhanced visual content display has also increased. The visual content display of the mobile device may be provided by a display device incorporated in or coupled to the mobile device. Also, the visual content display may be provided by a separate display device such as a flat screen TV, a high resolution display device, etc. For example, during travel, a user may be listening to audio content (for example, audio books, music, etc.) on the mobile device while viewing information on the display of the mobile device. Further, the user may be playing a game while viewing a video content on the display of the mobile device. When viewing visual content on the mobile device, the user may also wish to view other content such as music, audio books, videos, etc. on other devices (for example, on the display of another mobile device, on a TV, etc.) that are coupled to or otherwise connected to the mobile device. Currently, the user may use various types of wireless technology such as IEEE 802.11, Bluetooth, Wi-Fi, 3G/4G network and the like to transfer the content between the mobile device and the other devices. Further, while viewing the visual content on the display of the mobile device, the user may also wish to simultaneously listen to the audio content such as music, audio books, videos, etc. that was being played on the mobile device. The conventional methods of listening to the audio content while viewing the visual content and vice versa, however, may not be user-friendly as the user may need to switch between the viewing of the visual content and the listening to the audio content each time the visual content is changed. The user,
