The following list details some of Photoshop's most common features. I recommend that you take the time to read the Photoshop help files included with your software and also the free Adobe tutorials on their website. * **The Photoshop interface**.

The top of the screen displays a toolbox menu that includes most of the Photoshop tools and that also contains tabs that allow you to access your most used tools. * **The Layers panel**.

You can view all your images, and then you can add or delete layers. Layers are typically used to isolate and work on portions of an image. You can add layers to an image and then move the layers around to change the composition or content of the image. You can also use layers to build shadows and highlights on an image and create special effects. You can add new layers with the Layer menu and then delete layers from an image with the Layer menu. * **The Image menu**.

The Image menu includes a variety of tools you can use to manipulate an image in the Layers panel. The Layers palette and the Selection tool are two tools you use to edit and manipulate an image. * **The Table palette**.

The Table palette is a tool you can use to add text in the layers of a photo. You can also add other items like shapes, captions, and matting. * **The drawing tools**.

You have a number of drawing tools in Photoshop. * **The color palette**.

You can use this palette to choose colors for your images. * **The vector tools**.

You can manipulate the edges of shapes and paths to create lines and curves. * **The 3-D tools**.

You can create 3-D objects, such as 3-D text, with these tools. You can create a 3-D image, add a 3-D box that sticks out of the image, or add an object to a photo. The following list describes a few of the most common tools in Photoshop: * **The Move tool**.

You use the Move tool to pick an area and then drag it to a new area. For example, you can drag an area of an image that you want to move onto another area of an image to create a new composition. * **The Rectangle tool**.

The Rectangle tool is an important tool for quickly editing images. You create a rectangle by first

Description The 1820-S is a modern-day revival of the rarest coin in the world, a one-cent silver coin, first issued in 1838. The coin’s mint-mark reading “1838,” appears on the coin's reverse. The coin’s design shares traits with the second version of the “Capped Bust” obverse, with a more even distribution of the weight across the coin’s face. Overall, the coin’s design is cleaner and more compact than the 1838 and 1912 designs. In fact, the coin’s design is “much more anonymous” than either 1838 or 1912 composites, according to a description published by the United States Bureau of Engraving and Proofs. The 1820-S is the latest denomination in the Silver Eagle series. After decades of production, the U.S. Mint has stopped producing 1-cent pieces and has replaced the last of their 1838-S one-cent pieces with the 1820-S. The 1820-S has a mintage of only 60 pieces, and is one of the rarest coins in the world today. The coin’s mint-mark on the obverse reads “0.9999 fine silver, one-tenth ounce.” According to the U.S. Bureau of Engraving and Proofs, the value of the 1820-S as determined by the National Numismatic Collection is a remarkable \$65,000.00. Gulu, Uganda (CNN) When John David Muhanguzi stepped on an improvised explosive device (IED) in southern Africa's newest war zone, his fractured pelvis was the least of his worries. "He pulled out a stick and stuck it on there. If you are walking around with a stick in your hand, you can't be out there fighting, walking around these areas, for it could explode," Muhanguzi says as he sits in a makeshift clinic in his remote village in Uganda. The makeshift clinic has been set up in a small community room on the grounds of the Lutheran Church of Sweden, a group of volunteers who have brought medical help and hope to remote communities. CNN visited the church last month in Gulu district, where the IED strike took place. The military will take months to remove the IED, attached to a tree stump under the floor of the community room. The country is now at war with a mix of Ugandan and Congolese rebels. They have occupied Gulu town and the neighboring Acholi region since 2013, prompting a humanitarian crisis. Hospitals are so overwhelmed that many are ill-equipped to deal with the number of victims. Read MoreIt is known that certain compounds can be prepared by reacting a mixture of a substituted aromatic compound (A) and a phosphine (B) with an activated metal to form a metalated aromatic compound (C), said aromatic compound (A) containing one or more phosphoryl substituents on a carbon atom adjacent to the bonding position to the metal atom, and said metal being selected from those of the metals of the fourth main group of the periodic system, to effect displacement of the phosphoryl substituent with group (C) to form the aromatic compounds (D). The aromatics (D) can be subjected to a thermal cyclization (D) to form the 1,4-diphenyl-1,3-butadiene 1,4-diphospholene (E). The compound (E) can be hydrogenated to form the cyclopentene, the corresponding 1,3,5-trisubstituted cyclopentene being known as a tetramethyltetraphosphonium salt or a compound represented by the following formula: ##STR1## Compounds (E) are of interest as synthetic intermediates. In addition, the compounds have found utility as surfactants.Q:
