I would like to make a list with all word2vec models used in my code. I'm trying to use layers from the theano import function, but no luck at all. import numpy as np import theano from gensim.models import Word2Vec model = Word2Vec(size=10, min_count=1, alpha=0.1, negative=5, window=10, iter=10, workers=4) model.build_vocab(n=10000, min_count=1, alpha=0.1, negative=5) #try to get layers import theano layers = theano.function([], theano.tensor.shape(model.wv.wv.layers), mode="FAST_RUN") Any ideas? A: The layer is another object you can just use the methods and properties from, so for example in your code you just need to add these lines and get the result you want: layer = model.wv.wv.layers print layer.dims print layer.cost These print the dimensions and number of words in the vocabulary
