Real-world player motion is used to provide player control adjustments in the form of changes to player sprint, jump and acceleration. As on FIFA 17, improvements have been made to the tackling and catching system. Players can tackle high using the Simulant and Attentive Tackle controls to dive at the ball and add to their success rate for goal-scoring. Newball control allows players to pick the ball up, change their body position and drag the ball with more precision. Fifa 22 Activation Code introduces the "Superstar Pass," which is received by the player who has the most pace when attempting a pass. The system will reward a player with Superstar Ball control and help them receive the pass they need to score. Overall, the player who is the best at getting the ball forward will be rewarded with better finishing opportunities and the opportunity to score. New Senses (Vision, Hearing, Olfaction, Gustation, Taste) are all unlocked by the "Action" game play difficulty settings and they give you access to new ball control moves. To enhance ball control, there are a number of ball control moves you can use. Players can use ball control moves to drag the ball forward, split the ball in the air, or control the flight of a pass while controlling the ball with the feet or on the half-volley. New Ultimate Team (UT) Draft Mode introduces a new Story Mode that allows you to purchase players and earn rewards in a series of challenges. You can also engage in practice mode and increase your players' attributes, boost their stats, or unlock new Ultimate Team features such as coaching badges and equipment. SEGA's official websites will be updated on September 20 at 3 p.m. PDT, so keep an eye out for it! Fifa 22 Cracked Version lets players compete in a new action-packed and immersive FIFA gameplay experience. With "HyperMotion Technology," players will feel every last detail in the weight of the ball, responsiveness to movement and tackling, and the skills of your teammates. New features include a Star Player Balance, which gives players a new way to play and develop their team. Cracked Fifa 22 With Keygen also introduces a new Senses Mode, which allows players to experience the world through the eyes of a real soccer player. Senses Mode is available by selecting the "Action" game play difficulty setting. Newball Control allows players to drag the ball with greater precision when

1. Field of the Invention The present invention relates to a new type of pyrotechnic composition and a pyrotechnic composition using it, and more particularly, to a new type of pyrotechnic composition and a pyrotechnic composition using it which are particularly useful for a fire-extinguishing device.

2. Description of the Related Art A pyrotechnic composition generally is used in fire-extinguishing devices, such as a fire-extinguishing device in which a chemical fire-extinguishing agent such as a water-powder or dry-powder chemical is used. Recently, there are also increasing demands for making the devices lighter in weight, which is an essential condition for making the devices applicable to the field of aircraft or automotive application. For making a fire-extinguishing device more compact, it is preferable for the fire-extinguishing device to be made compact in size and weight. However, if the fire-extinguishing device is made compact, a large quantity of the pyrotechnic composition should be employed, which may increase the size and weight of the device itself. It is an object of the present invention to provide a pyrotechnic composition which can exhibit satisfactory performances even if a small quantity of it is used in a fire-extinguishing device which is compact in size and light in weight. To attain this object, the present invention provides a pyrotechnic composition which comprises a mixture of 0.1 to 20 parts by weight of a composition comprising an inorganic oxidizing agent and an inorganic flame-retardant agent per 100 parts by weight of a binder resin, and 0.01 to 10 parts by weight of an organic fuel per 100 parts by weight of the composition, the composition having a viscosity in the range of 10 to 10000 mPa·s and a specific surface area of 5.0 to 12000 m²/g. The pyrotechnic composition thus provided gives a satisfactory ignition performance even when a small quantity of it is used and in turn can contribute to a decrease in the size and weight of a fire-extinguishing device using it. The inorganic oxidizing agent which may be
