The result is a highly responsive and accurate game, with more than 50% of actions performed in off-ball situations reflecting the player's movement. The physics engine has been rebuilt from the ground up, and provides gameplay more in line with the on-the-ball actions from FIFA 19 than past iterations. "FIFA 19 marked the start of a new era for FIFA," comments Tim Beijer, Executive Producer at EA Sports. "We upgraded the entire game engine, created new camera angles and lighting environments and finally introduced a new mode we hope to establish as the standard for realistic sports games: 'Play Your Way.' So when we set about improving the technical capabilities and realism of FIFA 22, we wanted to go in the same direction with the engine, and create a more dynamic experience for the player." FIFA 22 sees improvements to player models, animations, player intelligence and ball physics, with performance and stability improving as well. Unparalleled graphics are not just for show. Due to the immersive nature of FIFA, players always have to run, jump, turn and sprint, but we designed every action using motion-capture technology. For example, players respond to collisions and tackles in a new and more lifelike way, and even running by more than 20m away is captured accurately, thanks to our in-depth Motion Match Engine. The way footballers move naturally is more important than ever, which is why we made a huge effort to replicate the naturalness and intensity of a professional football match using FIFA's most detailed in-game animations and performance capture. Players will feel more connected to the game, as the improved physics system makes a lot of the game more like reality. Movement is more responsive, especially when players are getting up, running or tackling. The game is also much more intuitive, as players do much more off the ball. The improved ball physics should make the ball react more naturally to the surrounding environment and the player's movement, whereas in previous FIFA games it was always "invisible". Players' movements become less predictable, such as to pass or shoot with more ease, making the game more realistic and immersive. This is not a game of playstyles, but real football.

With so much time, skill and passion invested in the game, it is no surprise that so many players have created more than 7.5
