The learning curve for Photoshop is substantial. Learning it takes time and dedication. Luckily, there are lots of online tutorials available, and there are many books on Photoshop, some of which are included in the following chapter. See Chapter 10 for the basics. Photoshop is great for building a website,

creating collage art, and editing an image. It can help you scrapbook, create art, and design web graphics. Whether you're just learning the basics or even a guru, Photoshop has many, many tools available to help you make your images beautiful. * * * ## Using the Lens Correction Tools If you have a DSLR camera, you may have noticed that your camera includes a few different correction tools for your wide-angle and long-lens (telephoto) images. These tools are

designed to correct a variety of lens faults, such as barrel distortion, which is a defect when you have some sort of distortion to your perspective and is common when you photograph things at a distance. To use the Lens Correction tools, first make sure that your pictures are in the Adobe PSD format (the file format of Photoshop), and then double-click on the Layers icon in the layers panel. Click the New Layer button (the + icon), and you'll see the Lens Correction tools listed in the drop-down

menu in the Layer panel. You can then select any one of the Lens Correction tools and click anywhere on your image to apply it. While the tool does work, many people find that it misses the mark.

A group of protesters associated with the terrorist group New Black Liberation Militia is accused of torching an Alabama gas station, shooting a police officer and attacking a man's house. A jury sentenced the group's leader, 35-year-old Daron Duane Brown, to five consecutive life sentences for two counts of murder and two counts of attempted murder, AL.com reported, citing a Feb. 23 Shelby County Circuit Court

verdict. Brown and the group, which was also known as the New Black Panther Party, were charged with various crimes in the Dec. 28 attack. Investigators said that a group of angry protesters gathered around a Dollar General in Montevallo, Alabama, and threw objects, including rocks and Molotov cocktails, at a business. Numerous small fires, which were doused with a fire extinguisher, were ignited at the gas station. McNeal Franklin, 61, a father of seven and a

parishioner at New Beginnings, an Apostolic church in Huntsville, Ala., was beaten by the protesters. According to Franklin, a protester told him that "they was going to burn your house up" before he was hit with a baseball bat. "All they was trying to do was racially profiled me," Franklin said. "They was trying to put a fear in me." Franklin was taken to a local hospital and underwent surgery after sustaining a broken jaw and broken cheekbone. The protesters were allegedly

involved in torching the Dollar General and attacking patrons. Police Officer Evan Spencer, who was on duty, tried to stop the attackers. According to Spencer, one of the suspects fired on him. Officers eventually stopped the group and pulled over an Acura Integra, which contained four suspects, one of whom police said had "multiple gunshot wounds." A second car driven by 30-year-old Eric Downing had two other suspects who were shot in the leg by law enforcement officers. A jury

deliberated for more than three hours on Feb. 23 before convicting Brown. WSB-TV said that while the trial was being broadcast in the courtroom, Brown spat on a state trooper, calling him "taser king." Police said that during the trial, Brown also shouted "shoot them all," referring to police officers. The New Black Liberation Militia, which was formed in 2009,

for bone tissue engineering: printing and cell seeding. Despite rapid developments in the fields of bioengineering, tissue engineering and biomaterials, one of the biggest challenges remains the lack of suitable scaffolds to support tissue regeneration. In this article, we review the printing of 3-dimensional (3-D) hydrogels suitable for bioprinting, the use of 3-D bioprinting for fabricating complex tissues, and the printing of functionalized scaffolds containing cells, growth factors

and other bioactive compounds that may accelerate the regeneration of tissues. Additionally, we explain the reasons for the low success rates achieved in currently published trials for 3-D printing using hydrogel scaffolds and discuss the challenges that researchers must solve in order to develop 3-D printed hydrogel scaffolds that meet the requirements of tissue engineering.Description: In this video from the Cinema Workshops 2017, Gail Mason

demonstrates how to make carded papier-mache. (Adobe Flash Player 11 or later is required to view this video.) It's wonderful what people can create by using materials that would otherwise end up in a landfill. This project was created by students from Ireland's Genuis Education Development Centre. The students start with a large cardboard box and use scrap wood to create a false window, a door and a window sash. They then apply strips of paper or card stock to these

cardboard supports. Not only does this create a fantastic window display, but also a wonderful table wreath! You can create your own Carded Papier-Mache in similar ways. I'd love to hear how you decorate the end results! Also, if you create your own projects using paper-mache, please share pictures and your inspirations in the comments section below!
