Abstract: Game Development based on the Ethereum blockchain can be used for consumer payments and a decentralized games platform. Whereas most blockchain games are built on just one blockchain, the FUZE project will build a games platform where it will be easier for developers to integrate their games with a variety of blockchains. The blockchains we are using will be Bitcoin, Ethereum, and Ethereum Classic. Other blockchains could be added to this. The FUZE blockchains are the underlying blockchains of the GINLEX token. A network of blockchain games such as DApps, crosschain games, crypto game platforms will be built on FUZE blockchains. The GINLEX token will be used for payment of service and in exchange for other transaction fees. Transactions are stored in the GINLEX blockchain and all games will use GINLEX tokens as a currency. The FUZE Project includes four development packages: 1.FUZE Protocol The FUZE protocol is the core of the GINLEX blockchain games platform. FUZE provides a blockchain accounting layer which can track ownership of items, create new items, and pay for services and interactions with users. 2.GinIndex The GinIndex is the currency for the GINLEX blockchain games platform. It holds a value equivalent to the value of the GINLEX blockchain asset network, creating a value-backed currency. 3.G
