**Shadows Of The New World is a first-person shooter, with a very unique idea, and unique gameplay: the game is actually divided into two different games. The first half, story-driven, is called "Discord". After the main story arc is finished, the player gets a new side-quest, leading to the second part of the game, which is called "Ragnarok". Gameplay: Shadows Of The New World uses the Epic Games' Unreal Engine, and is aiming for a new kind of experience: the game is actually divided into two different games - the first one is called "Discord", and the second one is called "Ragnarok". Most of the story-driven and cut-scenes are in the game "Discord", and after the main story has ended the player gets to play the second part, Ragnarok. In "Discord", the player will follow the main character, Johnny, who was one of the soldiers of the previous game, Shadows Of The Old World. The story-driven part of the game is basically "Johnny's tale", where he returns to New Orleans to bring the people's spirits back to life. In "Ragnarok", the main character will be Johnny's sister, Athena. Athena will go around the world, looking for their missing mother. She goes to the places where their mother once visited, and there are clues of her whereabouts. Ragnarok is a story about myths, with a modern setting, where myths are actually real, but the darker side of them is already revealed. You will play as Athena in this part of the story, in which she will go to different locations and finish different quests, searching for her missing mother. Shadows Of The New World also follows the "fast-paced first-person shooter" concept. The enemies are also represented by "tags", which you can customize, for example, with different weapons and armor. There are also environmental hazards, which are represented by blocks. If you kill an enemy, you will receive coins. If you get enough coins, you can buy better weapons and armor. You can unlock new levels as you play the game, and this process is supported by "level-ups". Every character has different "tags", which you can customize, for example, with different weapons and armor. Every enemy will give you**

**“Wonderful to behold and worthy of more than a passing glance.”9.5/10 MMORPG (May 24, 2017)One of the best MMORPGs ever made; loads of fun in a dynamic setting5/10 KotakuI'm jealous of your dragon rides9/10 BehemothAfter you set your mind to it, you can find a great balance between combat and exploration9/10 IGNSmooth, deep and playful8/10 USA TodayYou'll enjoy the colorful world and the boatloads of jokes and references8/10 PC Gamer “ ... You'll notice there's not a lot of dumbing down in Dreamfall, and that shows in the game's balance and accessibility. It's certainly no Elder Scrolls or World of Warcraft, but it does so many smart things that it comes close.”9/10 Eurogamer. On most levels it looks just like a beautiful first-person shooter. The characters have funny faces and personalities, the NPC dialogue is funny, the combat is cool and the puzzles are clever, with a constant stream of jokes, asides and visual puns. It's a joy to play. Gameplay Knights And Bikes is a pretty obvious rip-off of everything you loved about Portal. The character animations, the premise, the dialogue and the cast are all Portal-inspired. But that's just the tip of the iceberg. The puzzle design is brilliant. The character movement, character interaction and even the AI are all influenced by the Portal series. The main goal is to plant golden keys at golden kiosks, which in turn open up another golden door. It's very clever stuff. Then there's the tone, and the ability to interact with the world and each other in more ways than you would expect. This makes the whole adventure much more fun and memorable. There are lots of puzzles to solve and you can make and answer many funny and sarcastic remarks about your environment. The combat is tight and well-balanced. You'll probably love it. Unfortunately, I'm not a big fan of this genre, and I'd say that the puzzles are too clever for me. What about you? Gameplay Knights And Bikes is an action-RPG like no other. It doesn't even have a**

In **Unseen**, you take on the role of a plant which has been awakened by the arrival of a distant space traveler, and is attempting to get home without disturbing the Earth. To this end, you plant seeds throughout the solar system, and the goal of the game is to grow the plants into plants with your own significance, so that they can assist you in your journey home. Unfortunately, space travel is still somewhat limited, which means that in order to return home, you'll have to do most of your growing on planets. In this alternative reality, humans have been destroyed, and the story is instead that of an alien race that has begun slowly spreading across the solar system. In the original story, the player is a traveler who was just in the wrong place at the wrong time, and his/her continued survival is up to luck. In **Unseen**, the traveler is a man-made creation, and his/her survival is up to you. Which do you choose? While there are many similarities between **Unseen** and **Forgiven**, the main difference is that in **Forgiven**, you play as a planetary probe, tasked with visiting worlds and investigating them in order to determine whether or not they are inhabitable. In **Unseen**, you play as a root, or plant, which you can use to grow into a sentient being. As a sentient being, you are a form of self-awareness which is able to think and act on its own behalf. However, you are capable of thinking and acting like a single human being, and despite being self-aware, you are limited in your cognition. Plot: The game begins on an unoccupied planet, with a single seed which has been planted by an unknown traveler. In order to grow, the player must plant himself/herself on various planets. The game has a distinct theme of being an act of colonization, and many of the planets you plant will slowly take on a set of characteristics which embody the
