1.0: The first public release of AutoCAD from 1983. 1.1: The first major release. 1.2: The first release of AutoCAD for Windows. 1.2.1: In this version, the "block" feature was introduced. 1.3: The first release with an external mouse. 1.5: The first release with the ability to export/import a DXF file into/from a drawing. 2.0: The first release with a command line. 2.1: The first release of AutoCAD for Mac OS. 2.3: The first release that can export a DXF file. 3.0: The first release of AutoCAD for Linux. 4.0: The first release of AutoCAD for mobile devices (tablets, smartphones, and laptops). 5.0: The first release of AutoCAD for Web-based collaboration. AutoCAD 1.0 included a set of features for the AutoCAD operator's interaction with a computer. The first feature was a command line, where the operator could enter text commands directly into the application. The text was placed in a scratch area on the screen, where the operator could revise the text by typing it into the scratch area. The operator could then activate or run the command by pressing a key on the keyboard. The operator's actions on the screen were always recorded into the drawing data. The second feature was a pencil, where a previously stored file of commands could be reused by making new commands, and storing them in the drawing file. This was commonly referred to as "block" in the industry, although it is not a block feature in AutoCAD, but a feature that works more like an assembly of commands. The third feature was a "draw mode", where the operator could draw a representation of a component (a car body, for example) on the screen. Later, the drawing could be exploded into several components, giving the operator the ability to see, edit, and rotate any part of the drawing. The fourth feature was also a draw mode, but the operator drew on the screen instead of creating a component. This allowed the operator to draw various paths and lines that would be used to create new blocks or shapes. Later, commands were added to allow the operator to automatically place and label blocks, and even create

I want to use a MySQL stored procedure in Python. I have the following: import MySQLdb as mdb import pandas as pd mysql = mdb.connect('localhost', 'username', 'password', my_database_name) cursor = mysql.cursor() # get data from the database, sort it my_data = pd.read_sql_query(""" SELECT * FROM history_stored_procedure ORDER BY timestamp """) The problem is, when I run my_data.timestamp, it comes up as type'str'. I know this because I'm printing the type of my_data and it is returning str instead of datetime. I tried converting the timestamp column to a type of string as well, like this: my_data['timestamp'] = my_data['timestamp'].astype(str) but that doesn't work either. The same ca3fb1094

AutoCAD Serial Key

Open Autocad and create a new drawing. Edit drawing properties. Enter random password and click "Activate." Click "Load Autocad Drawing." Click the "Generate key" button. Next enter the license key generated by Autocad and press "Generate". Save your drawing as a *.dwg. Open the *.dwg in Autocad. Click "Save..." Click "Apply All" in main menu. Click "Save As..." and save the file in a different directory, you should name it as the *.docx file. Click "Open". I hope this help! Archive for August, 2010 Glenn Greenwald calls it "one of the worst and most misleading claims of the Obama administration," and with reason. By the conservative activist group Judicial Watch, it appears to be the sort of thing you don't get to take as proven fact if you aren't a Wall Street Journal. The claim? Judicial Watch, a conservative advocacy group that investigates the activities of the federal government, accused the White House of trying to "eliminate transparency" over the Internet and has filed a Freedom of Information Act request to obtain more information on the terms and conditions of the new health care law. The group said it filed the request because of "significant changes" made to the Internal Revenue Service by Obama's director of tax policy. The group said the changes should be subject to public disclosure because the agency is one of the law's main implementers. The article goes on to note that (click for a larger version): "The new Obamacare law, which most Republicans have said they will repeal, requires all citizens to have health insurance by 2014 or face penalties," Judicial Watch said in its blog. "The law also requires all employers with 50 or more workers to offer health insurance or pay a penalty of \$2,000 for each worker, and mandates that individuals purchase health insurance by 2014." In an apparent reference to the IRS, the group asked for any "communications concerning what the tax agency's 'business hours' will be for the 2014 tax year." It also asked for any communications "concerning the organization's contentions that the IRS exempts certain communications from its Freedom of Information Act (FOIA) search process
