What's New in the?

We are working to add even more ways to help you send and incorporate feedback. For example, we're planning to add a feature that'll let you import a previously created, shared annotated drawing or presentation. We're also working on ways to better share your feedback from our existing Feedback Assistant tool, and we'll be integrating it with the overall Sketchbook experience in the future. Sketchbooks: Annotate drawings and connect them to existing models and other drawings. (video: 1:20 min.) In AutoCAD 2023, we're making it easier to create, share and annotate model sketches. Sketchbooks are a new way to view and annotate multiple AutoCAD models simultaneously, so you can edit, annotate and share multiple drawings at once, without switching back and forth. Sketchbooks support different visual styles, so you can quickly see the model as is, or with stylized views and annotations. You can also use Sketchbooks to explore models interactively, by comparing alternative views and visual styles. Additionally, Sketchbooks can include the annotations created in other Sketchbooks. Sketchbooks and models can be shared and annotated with others through the Online Services, and through the Desktop and Mobile apps. 3D models: Create a 3D model from a scanned drawing. (video: 1:07 min.) In AutoCAD 2023, you can directly model a scanned drawing in the design environment, so you can cut, trim, bend, form and texture 3D models. Simply select the Draw Objects tool and bring in a 2D drawing file, and you'll see a 3D model appear in the active viewport. When you're done modeling, you can export your design directly to AutoCAD VR, or send it to the Export tab to share with others. 3D Mesh Converter: Import an external model and turn it into a geometry mesh. (video: 1:05 min.) The 3D Mesh Converter helps you use any 3D model on the market, including not only objects created using 3D software, but also 3D models created from 2D drawings in AutoCAD. The 3D Mesh Converter tool lets you quickly create a mesh from a 3D model, an external or internal drawing
