Thyroidectomy for thyroid carcinoma in pregnancy. Thyroidectomy in pregnancy is a challenging but safe condition. Advances in anesthesia and imaging have made thyroidectomy safe for both the mother and the fetus. The late pregnancy stage of 18 months or more is commonly accepted for thyroidectomy. In our experience the pregnant stage during the first and second trimesters is not contraindicated and also appears to have a lower risk than the late third trimester when the placental circulation becomes established. Three thyroidectomies were performed in pregnant women from a developing country, two at stage one of pregnancy and one at 32 weeks. In the first case, the need for intervention was suggested by a routine ultrasound scan, and both resection and thyroxin replacement were performed. c9d1549cdd
