Autodesk AutoCAD Activation Code offers multiple drafting tools and viewing options that can be used individually or in combination. In addition to conventional 2D drafting tools, AutoCAD has 3D CAD and 3D drafting tools. One of the unique features of the application is that the user can work at a 2D or 3D view on screen at the same time, thereby enabling simultaneous creation of 2D and 3D designs. AutoCAD was initially released on the Apple II platform, with Macintosh and PC versions following in 1987. Since then, the application has been continually improved, with new features being added at regular intervals. Although its roots were in the drafting industry, AutoCAD has a number of uses outside of the conventional drafting application. A free-form drawing tool, it can be used for 3D modeling, 2D presentation, and 2D engineering. Autodesk AutoCAD is also widely used for reverse engineering, 2D model checking, and assembling/detailing. History Autodesk AutoCAD: the Early Years, 1982-1987 When AutoCAD was introduced in December 1982, it was designed specifically for desktop use by corporate architects and engineers. Using the newly released Apple II platform, AutoCAD was designed to work on a shared platform with other Autodesk products such as the AutoCAD 100 series drawing software package. During the 1980s, Autodesk released a number of versions of AutoCAD to the public, in addition to the computer-based drafting software. The first public version was AutoCAD 80. To produce the new version, Autodesk worked with 3D Studio Incorporated (3DSI), an Apple development studio formed in 1977 that helped develop AutoCAD. It consisted of a group of engineers at Autodesk with experience in the drafting industry who created a new application, the version 80. The 1980s saw AutoCAD grow in popularity as the graphics standards for microcomputers improved and computer power increased. By the time AutoCAD version 100 was released in April 1987, a new look and feel had been adopted, along with a new user interface and workflow. The 1980s saw the release of many new technologies that are still used by AutoCAD today. The HyperCard platform was introduced in Apple Macintosh computers in 1983 and has since grown to be an industry standard. Autodesk also released AutoLISP in 1986 to take advantage
