Version history AutoCAD began life as an on-line, single user drawing tool first released in 1986, developed by Paul White at the United States Environmental Protection Agency, although by then, a

couple of years prior, Paul was working on his own 3D animation software product "Graphics Magic" and was generating some artwork with AutoCAD. Although the product was popular, Paul believed that the on-line drawing, connected to a server, was not as successful as an actual graphics suite.

Because of this belief, Paul left the EPA and after many months spent in experimentation, he invented the first version of AutoCAD. Paul and his wife Maryann then founded a company, White Technical Services, in 1987. The company released its first version, "AutoCAD-1" in early 1988. The version was a single user drawing product with several types of input devices. It was initially released for DOS and Macintosh, although the DOS version is not available today. AutoCAD-1 was released in 1989. Since its creation, it has become AutoCAD, the first version of which is often referred to as AutoCAD-1, and the name was officially changed in 2008 from AutoCAD 2000 to AutoCAD LT. Over the next few years, version 1.x was also the first version to be released for Windows. In 1992, Microsoft announced that it would support the DXF file format, which can be imported into the.dwg format. This version (AutoCAD-2) incorporated many innovations, and was released in 1993. The trademark name for the current version of AutoCAD is AutoCAD LT, the first commercial release was AutoCAD LT Release 1 in 1999. The next version of AutoCAD to be released commercially was AutoCAD 2002, which was released in 2001. AutoCAD LT 2017 is a recent addition to the line of AutoCAD LT products. Features AutoCAD LT 2017 has the following features: Design, specify and update properties on entities of different types. To and from DWG objects. Geometry editing. Design new features like product modeling, 3D design, water and wastewater systems. 3D data management. Create and edit.OBJ files. Design and draw topological representations for 2D surfaces and solids. Design surface and solid editing features. Enable you to draw curves, polylines, surfaces and solids on any af5dca3d97

I'm sitting on a plane to Ghana. It feels a bit odd to be sitting in an aeroplane and not standing on a land. Island fever, anyone? Anyway, I am here because I want to be and because we are planning to find jobs in Ghana. I may well be blogging about my trip and my job search at the same time. On a related note, I want to start a new habit. I want to bring my own lunch every day to work, when I am at work. I'm not really sure how I'm going to achieve that but I'm certainly hoping that there are food establishments here that allow us to bring our own lunch. I am not really sure if that is the case. So I might need to send my husband to see first, which is always a good thing to know before I start bringing food to work. The main reasons why I want to bring my own lunch are: Less time spent in traffic Less expensive No need to change the dressing of my meal I could meet new people Less time spent in the midst of a bunch of people And, of course, my lunch box would look nice. So if anyone reading this is planning to come to Ghana, or if you are already in Ghana, let me know how to best bring my own lunch to work. How is it organised? Is it fine for me to bring a
